con Decreto dell'8 Gennaio 2008

Laboratorio R&D accreditato

MIUR

Ministero dell'Università e della Ricerca Scientifica Tecnologica

FRIULI VENEZIA GIULIA

Regional projects

- Cooperation with Danieli Industries
 - Apprenticeship with several companies

THANK YOU

STX EUROPE: REPORT

STX Europe is an international shipbuilding group which aims to be the leading builder of cruise and offshore vessels. The group has a strong position in terms of technology, processes and products for customers around the world.

STX Europe, Brattvaag has a long tradition OF COLLABORATION with customers. This tradition has given STX Europe Brattvag a leading role in the international market for offshore and specialized vessels. This company has approximately 16,000 employees.

SO, How does stx Europe Brattvaag promote information to students?

In the Kindergarten and elementary school:

- they visit the kindergarten
- they receive visits from primary school and from secondary school
- they organize partnership classes
- they assign projects
- they organize trade fairs

In grade 8 of secondary school students become familiar with local businesses and develop interest in working with them.

In grade 9 of secondary school students collect information about the different education programs to choose one of them. In November they have a 2-day visit at a high school with practical tasks.

In grade 10 students join some of STX Europe project to learn how to solve real business problems related to the company.

High school

STX Europe cooperates with Haram high school to employ all kind of technical apprentices. Moreover, they promote summer jobs and school visits. At international level STX Europe participates in some school projects: training for engineers (Norway cooperates with the UK), the Leonardo project (Norway cooperates with Italy).

College / university

The stx cooperates with Molde and Alesund college to form maritime staff.

As you can see, STX starts early to inform Norwegian students. What about Italy?

In our country the cooperation between schools and industries is typical of the final year. In fact, students begin to work for the company and join projects only at the end of the high school. Internships tend to be in Italy, only occasionally abroad. They last 2 weeks. In Friuli Venezia Giulia (our region) Danieli, a steel plant known world-wide, is a privileged partner.

Miur website: useful for choosing university faculties

POLARIS project by the Chambers of Commerce, Industry, Handcraft and Agriculture to promote the connection between apprenticeship and employment in order to help the transition from school to the job world.
